INDEX TO VOLUME VIII

Additive and antagonistic effects, The, of sodium and calcium chlorides upon viability of *Bact. coli*. Studies on salt action. IX 237
Aerobic bacteria, The fermentation of arabinose and xylose by certain 277
Agar media, The growth of yeasts on synthetic 585
Agglutination. Antigenic relationships of *Bact. typhosum*, I 533
Albus, William R., and Sherman, James M. Physiological youth in bacteria. 127
Allen, Paul W. The attenuation of bacteria due to temperature shock 555
Ammonia oxidation, The mechanism of. On nitrification. V 343
Anderson, J. A., Peterson, W. H., and Fred, E. B. The fermentation of arabinose and xylose by certain aerobic bacteria 277
Antigenic relationships of *Bact. typhosum*. I. Agglutination 533
Apparatus, An, for tubing semi-solid media 551
Arabinose and xylose, The fermentation of, by certain aerobic bacteria 277
Arnold, Lloyd, and Brody, Louis. Variation in the limiting hydrogen-ion concentrations of streptococci 307
Aroma-producing microörganisms 393
Attenuation, The, of bacteria due to temperature shock 555
Azotobacter chroococcum, *Beijerinckii* and *Vinelandii* types, Physiological study of 521
—— ——, Physiological study of. I. Influence of vitamine B (?) and nucleic acid on azotobacter 483
——, Influence of vitamine B (?) and nucleic acid on. Physiological study of *Azotobacter chroococcum*, I 483

Bacilli, tubercle, A comparison of the Ziehl-Neelsen and Schulte-Tigges methods of staining 121
Bacillus botulinus, The effect of certain bacteria upon the toxin production of, in vitro 319
Bact. coli, The additive and antagonistic effects of sodium and calcium chlorides upon viability of. Studies on salt action. IX 237
Bact. typhosum, Antigenic relationships of. I. Agglutination 533
Bacteria, aerobic, The fermentation of arabinose and xylose by certain 277
——, The attenuation of, due to temperature shock 555
——, The effect of certain, upon the toxin production of *Bacillus botulinus* in vitro 319
——, Further studies on the morphology of 365
——, Gelatin liquefaction by 297
——, A micromanipulator of, and the dissection of cells 1
——, The penetration of, through capillary spaces. I. Motility and size as influencing filterability through Berkefeld candles 459
——, Physiological youth in 127

Bacteria, The relation between chemical composition of peptones and hydrogen sulphide production by 287
——, Variations in hydrogen sulphide production by 115
Bacterial cultures, certain phases of nitrogenous metabolism in 7
—— growth, The stimulating and inhibitive effect of certain cations upon. Studies on salt action, VI 141
—— spores, The enzymic content of 487
Bacteriologic culture media, The titrimetric adjustment of the hydrogen ion concentration of 378
Bacteriological media, The formol titration of 245
—— ——, The mechanical behavior of dyes, especially gentian violet, in 567
Bacteriophage, Le, de d'Herelle: Ses applications therapeutiques 163
—— phenomena 49
Bacterium coli, The influence of calcium and sodium salts, at various hydrogen ion concentrations upon the viability of. Studies on salt action, VIII 215
—— ——, On the variation of 173
Beckerich, A., and Hauduroy, P. Le bacteriophage de d'Herelle: Ses applications therapeutiques 163
Beijerinckii and *Vinelandii* types, Physiological study of *Azotobacter chroococcum* 521
Bergstrand, Hilding. Further studies on the morphology of bacteria 365
——. On the variation of *Bacterium coli* 173
Berkefeld candles, I. Motility and size as influencing filterability through. The penetration of bacteria through capillary spaces 459
—— "V" candles, A readily cultivable vibrio, filterable through, *Vibrio percolans* (new species) 447
Biochemical study, Morphological, cultural and. *Clostridium putrificum*. II. 375
Bonazzi, Augusto. On nitrification. V. The mechanism of ammonia oxidation 343
Brody, Louis, and Arnold, Lloyd. Variation in the limiting hydrogen-ion concentrations of streptococci 307
Brown, J. Howard. The formol titration of bacteriological media 245

Calcium and sodium salts, The influence of, at various hydrogen ion concentrations upon the viability of *Bacterium coli*. Studies on salt action. VIII 215
Carpenter, D. C., and Levine, Max. Gelatin liquefaction by bacteria 297
Cations, The stimulating and inhibitive effect of certain, upon bacterial growth. Studies on salt action, VI 141
Cells, A micromanipulator for the isolation of bacteria and the dissection of. 1
Certain phases of nitrogenous metabolism in bacterial cultures 7
Chambers, Robert. A micromanipulator for the isolation of bacteria and the dissection of cells 1
Chemical composition of peptones and hydrogen sulphide production by bacteria, The relation between 287
Clostridium botulinum. IV. Resistance of spores to moist heat 269
—— *putrificum*. II. Morphological, cultural and biochemical study 375

Coagulation and sterilization of Loeffler's blood serum media under steam pressure 315
Colon-aerogenes group, Utilization of the salts of organic acids by the 493
Comparison, A, of the Ziehl-Neelsen and Schulte-Tigges methods of staining tubercle bacilli 121
Cultural, Morphological, and biochemical study. *Clostridium putrificum.* II 375
Culture media, bacteriologic, The titrimetric adjustment of the hydrogen ion concentration of 378

DeBord, George G. Certain phases of nitrogenous metabolism in bacterial cultures 7
d'Herelle, Le bacteriophage de: Ses applications therapeutiques 163
——, The relation of digestive enzymes and ferments to the phenomenon of .. 543
Device for tubing cooked meat medium 47
Dyes, The mechanical behavior of, especially gentian violet, in bacteriological media 567

Effect, The, of certain bacteria upon the toxin production of *Bacillus botulinus* in vitro 319
Enzymes, The relation of digestive, and ferments to the phenomenon of d'Herelle 543
Enzymic, The, content of bacterial spores 487

Falk, I. S., and Winslow, C.-E. A. Studies on salt action. VIII. The influence of calcium and sodium salts, at various hydrogen ion concentrations upon the viability of *Bacterium coli* 215
—— —— ——. Studies on salt action. IX. The additive and antagonistic effects of sodium and calcium chlorides upon viability of *Bact. coli* 237
Fermentation, The, of arabinose and xylose by certain aerobic bacteria 277
Ferments, The relation of digestive enzymes and, to the phenomenon of d'Herelle 543
Filterability through Berkefeld candles. Motility and size as influencing, The penetration of bacteria through capillary spaces. I 459
Formol, The, titration of bacteriological media 245
Fred, E. B., Peterson, W. H., and Anderson, J. A. The fermentation of arabinose and xylose by certain aerobic bacteria 277
Fulmer, Ellis I., and Grimes, Michael. The growth of yeasts on synthetic agar media 585
Further studies on the morphology of bacteria 365

Gelatin liquefaction by bacteria 297
Gentian violet, in bacteriological media, The mechanical behavior of dyes, especially 567
Gnezda, A test for indol based on the oxalic acid reaction of 577
Gonzales, F. L., and Holman, W. L. A test for indol based on the oxalic acid reaction of gnezda 577

Grimes, Michael, and Fulmer, Ellis I. The growth of yeasts on synthetic agar media 585
Growth, The, of yeasts on synthetic agar media 585
Gum levan, A study of the formation of, from sucrose 421

H. influenzae. The influence of H ion concentration upon structure. I 103
H ion concentration, The influence of, upon structure. I. *H. influenzae* 103
Hall, Ivan C. The titrimetric adjustment of the hydrogen ion concentration of bacteriologic culture media 378
—— and Peterson, Emelia. The effect of certain bacteria upon the toxin production of *Bacillus botulinus* in vitro 319
Hauduroy, P., and Beckerich, A. Le bacteriophage de d'Herelle: Ses applications therapeutiques 163
Hinkleman, A. J. Coagulation and sterilization of Loeffler's blood serum media under steam pressure 315
Holman, W. L. Device for tubing cooked meat medium 47
——, and Gonzales, F. L. A test for indol based on the oxalic acid reaction of gnezda 577
Hotchkiss, Margaret. Studies on salt action. VI. The stimulating and inhibitive effect of certain cations upon bacterial growth 141
Hydrogen ion concentration, The titrimetric adjustment of the, of bacteriologic culture media 378
—— —— concentrations, The influence of calcium and sodium salts, at various, upon the viability of *Bacterium coli*. Studies on salt action. VIII 215
—— —— —— of streptococci, Variation in the limiting 307
—— sulphide production by bacteria, The relation between chemical composition of peptones and 287
—— —— ——, variations in, by bacteria 115

Indol, A test for, based on the oxalic acid reaction of gnezda 577
Influence, The, of H ion concentration upon structure. I. *H. influenzae* 103
—— of vitamine B (?) and nucleic acid on azotobacter. Physiological study of *Azotobacter chroococcum*. I 483
Inhibitive effect of certain cations upon bacterial growth, The stimulating and. Studies on salt action, VI 141
Itano, Arao. Physiological study of *Azotobacter chroococcum*. I. Influence of vitamine B (?) and nucleic acid on azotobacter 483
—— and Yamagata, Unokichi. Physiological study of *Azotobacter chroococcum*, *Beijerinckii* and *Vinelandii* types 521

Johnson, Harlan W. A simple micropipette holder 573

Koser, Stewart A. Utilization of the salts of organic acids by the colon-aerogenes group 493
Kuttner, Ann Gayler. Bacteriophage phenomena 49

Levine, Max, and Carpenter, D. C. Gelatin liquefaction by bacteria 297
Loeffler's blood serum media, Coagulation and sterilization of, under steam pressure 315

McCrea, Forrest D., and Tanner, Fred W. *Clostridium botulinum*. IV. Resistance of spores to moist heat 269
McKinley, Earl B. The relation of digestive enzymes and ferments to the phenomenon of d'Herelle 543
Mechanical, The, behavior of dyes, especially gentian violet, in bacteriological media 567
Mechanism, The, of ammonia oxidation. On nitrification. V. 343
Media, Loeffler's blood serum, Coagulation and sterilization of, under steam pressure 315
Medium, Device for tubing cooked meat 47
Metabolism in bacterial cultures, Certain phases of nitrogenous 7
Micromanipulator, A, for the isolation of bacteria and the dissection of cells. 1
Microörganisms, Aroma-producing 393
Micropipette holder, A simple 573
Morphological, cultural and biochemical study. *Clostridium putrificum*. II. 375
Morphology of bacteria, Further studies on the 365
Motility and size as influencing filterability through Berkefeld candles. The penetration of bacteria through capillary spaces. I. 459
Mudd, Stuart. The penetration of bacteria through capillary spaces. I. Motility and size as influencing filterability through Berkefeld candles. . . 459
—— and Warren, Shields. A readily cultivable vibrio, filterable through Berkefeld "V" candles, *Vibro percolans* (new species) 447

Nitrification, On. V. The mechanism of ammonia oxidation 343
Nitrogenous metabolism in bacterial cultures, Certain phases of 7
Nucleic acid, Influence of vitamine B (?) and, on azotobacter. Physiological study of *Azotobacter chroococcum*. I 483

Omelianski, V. L. Aroma-producing microörganisms 393
On nitrification. V. The mechanism of ammonia oxidation 343
On the variation of *Bacterium coli* 173
Organic acids, Utilization of the salts of, by the colon-aerogenes group 493
Orr, J. H., and Reed, Guilford. The influence of H ion concentration upon structure. I. *H. influenzae* 103
Owen, William L. A study of the formation of gum levan from sucrose ... 421
Oxalic acid reaction of gnezda, A test for indol based on the 577

Penetration, The, of bacteria through capillary spaces. I. Motility and size as influencing filterability through Berkefeld candles 459
Peptones and hydrogen sulphide production by bacteria, The relation between chemical composition of 287
Peterson, Emelia, and Hall, Ivan C. The effect of certain bacteria upon the toxin production of *Bacillus botulinus* in vitro 319
Peterson, W. H., Fred, E. B., and Anderson, J. A. The fermentation of arabinose and xylose by certain aerobic bacteria 277
Phenomena, Bacteriophage 49
Physiological study of *Azotobacter chroococcum*, *Beijerinckii* and *Vinelandii* types 521

Physiological study of *Azotobacter chroococcum*. I. Influence of vitamine B (?) and nucleic acid on azotobacter 483
—— youth in bacteria 127

Readily, A, cultivable vibrio, filterable through Berkefeld "V" candles, *Vibrio percolans* (new species) 447
Reddish, George F., and Rettger, Leo F. *Clostridium putrificum*. II. Morphological, cultural and biochemical study 375
Reed, Guilford, and Orr, J. H. The influence of H ion concentration upon structure. I. *H. influenzae* 103
Relation, The, between chemical composition of peptones and hydrogen sulphide production by bacteria 287
——, ——, of digestive enzymes and ferments to the phenomenon of d'Herelle 543
Research, What constitutes efficiency in 197
Resistance of spores to moist heat. *Clostridium botulinum*. IV 269
Rettger, Leo F., and Reddish, George F. *Clostridium putrificum*. II. Morphological, cultural and biochemical study 375
Robinson, Elliott Stirling. Antigenic relationships of *Bact. typhosum*. I. Agglutination 533
Rogers, L. A. What constitutes efficiency in research? 197
Ruehle, G. L. A. The enzymic content of bacterial spores 487

Salt action, Studies on. VI. The stimulating and inhibitive effect of certain cations upon bacterial growth 141
——-——, ——-——. VIII. The influence of calcium and sodium salts, at various hydrogen ion concentrations upon the viability of *Bacterium coli*. 215
——-——, ——-——. IX. The additive and antagonistic effects of sodium and calcium chlorides upon viability of *Bact. coli* 237
Salts, Utilization of the, of organic acids by the colon-aerogenes group 493
Schulte-Tigges methods of staining tubercle bacilli. A comparison of the Ziehl-Neelsen and 121
Sherman, James M., and Albus, William R. Physiological youth in bacteria. 127
Shoub, Hyman L. A comparison of the Ziehl-Neelsen and Schulte-Tigges methods of staining tubercle bacilli 121
Simple, A, micropipette holder 573
Sodium and calcium chlorides, The additive and antagonistic effects of, upon viability of *Bact. coli*. Studies on salt action. IX 237
Spencer, S. C. An apparatus for tubing semi-solid media 551
Spores, Resistance of, to moist heat. *Clostridium botulinum*. IV 269
Staining tubercle bacilli, A comparison of the Ziehl-Neelsen and Schulte-Tigges methods of 121
Stearn, Allen E., and Stearn, Esther W. The mechanical behavior of dyes, especially gentian violet, in bacteriological media 567
Stearn, Esther W., and Stearn, Allen E. The mechanical behavior of dyes, especially gentian violet, in bacteriological media 567
Sterilization, Coagulation and, of Loeffler's blood serum media under steam pressure 315

Stimulating, The, and inhibitive effect of certain cations upon bacterial growth. Studies on salt action, VI..... 141
Streptococci, Variation in the limiting hydrogen-ion concentrations of..... 307
